

Amp'edUP SDK

Amp'edUP SDK is our embedded application development kit, providing a library based software framework, for your customized application needs. Our SDK product makes any of our various Bluetooth module solutions, into a true “wireless micro-controller”.

- Low cost BOM integration
- IP protection
- High flexibility

Amp'edUP Structure

(A full featured IAR compiler is needed for development)

- Bluetooth Upper Layer Stack, **Amp'edUP**
- Full Target platform support, STM32 micro-controller
- Including real time OS
- Easy JTAG development

Amp'edUP Stack
